17. A detachable sealing system for media-carrying parts comprising:
a seal adjacent to a wall of a media-carrying area, which seals the sealing system when the parts are braced against one another,
wherein the parts have mutually precisely complimentary sealing surfaces which are directly pressed onto one another to form a clearance-free seal at a contact surface,
wherein the contact surface between the sealing surfaces is limited to a narrow area directly adjacent to the media-carrying area, and has a width of $1/5,000$ to $1/50$ of a nominal width of the sealing system, said contact surface width being between 0.01 and 1 mm,
wherein guide sections are provided on both parts, the guide sections situated transversely to and spaced from the sealing surfaces, and

wherein, for pre-centering of the two parts, the guide sections have at least one insertion bevel for bringing the two parts together, and a separating gap is formed between the guide sections for aligning the two parts before the sealing surfaces are pressed together,

the sealing surfaces having a mutual guidance transverse to the media area walls and being, when pressed together, accurately fitting radially centered to each other,
